Mandatory AIDS Vaccine Coming Soon

Immunization Shots May Not Be Able to Be Avoided

The United Nations, which just had a big conference on AIDS, has a plan to infect the American people with the AIDS virus through what they call an "AIDS vaccine." They say this will stop the epidemic and "protect" us. They first want to use these AIDS shots on children and our military personnel. No one will be spared if their plan goes through. One AIDS vaccine could be on the market soon.

Back in the 1970s, the government used a swine flu vaccine on millions of people, only to find out later that it was causing health problems and even death. The program was cancelled – but only after 50 million people got their shots.

We can't take a chance on an AIDS vaccine. Millions could be infected before they realize they made a mistake. The Committee to Protect Medical Freedom (www.protectmedicalfreedom.com) has uncovered evidence that newborn babies are being given AIDS shots in federal experiments underway right now. The committee released a 25,000-word report examining the role of the UN, the U.S. government and billionaire Bill Gates in pushing the AIDS vaccine. This report is available on the committee's web site.

With few exceptions, our media won't tell you the awful truth. They tell us that the recent UN conference on AIDS was designed to spend more money on poor victims of the disease in far-away places such as Africa. But buried in the official UN declaration was that they want to "accelerate" the development of AIDS vaccines and "facilitate rapid access" to them around the world, including the United States. That means the UN will pressure our government – the Centers for Disease Control – to require that everybody take an AIDS shot.

So if you thought AIDS didn't affect you or your loved ones, please think

again. If AIDS doesn't kill you, this AIDS vaccine will. The vaccine gives people a form of the virus that causes AIDS on the assumption that we won't develop the entire deadly disease.

Experts and scientists at the Committee to Protect Medical Freedom conference on June 20 said this is just too risky and dangerous. The conference included Barbara Loe Fisher of the National Vaccine Information Center, Dr. Howard Arnovitz, and attorney Walter Kyle, who explained how contaminated polio vaccines may have led to cancers and AIDS in humans.

We need to encourage Congress to hold hearings on the HIV/AIDS vaccine project. We must draw the line against the UN on the matter of a mandatory AIDS vaccine. We can avoid AIDS if we just live a normal lifestyle. But we may not be able to avoid their AIDS vaccine. Please contact the following people:

- Beth Clay of the House Committee on Government Reform, 202-225-5074. Ask that Congressman Dan Burton conduct hearings into the HIV/AIDS vaccine project.

- John Bonsell at 202-225-2132. Ask that Senator James Inhofe, chairman of the Senate Subcommittee on Readiness and Management Support, conduct hearings into plans by the U.S. military HIV Research Project to use an AIDS vaccine on the troops.

- Dr. William Duncan at 202-225-2132. Ask that Congressman Ernest Istook seek hearings into the HIV/AIDS vaccine project.
